IP address check	1. Checking to make sure the IP address in the software is identical and consistent with the address on the ZGFree Box label and router label;
Software function check	1. Please replace the instrument and device files, restart the ZGFree Box, unplug all relevant data cables and power sockets, then restart the software; 2. If you encounter the following situations when scanning the surface or point cloud in the software, 1) The number of frames no longer increases, and the software interface still exists; 2) The laser line disappears and the software interface is stuck; 3) After long time scanning, the software may crash with probability; Please restart the ZGFree Box, unplug all relevant data cables and power sockets, then restart the software;
Scanning Precautions	1. The data transmission of ZGFree Box is based on the signal transmission of the router, please keep the router and the ZGFree Box free of obstacles or signal interference; 2. In order to maintain the stability of data transmission, please use a network cable to connect the router and the computer, do not unplug the network cable port; 3. During the scanning process, please do not disconnect the power adapter of the router or computer at will to terminate the power input; 4. During the scanning process, do not turn off the power of the ZGFree Box to avoid interruption of data transmission; 5. The 5G WIFI of the wireless router is susceptible to interference from external electromagnetic signals, please do not use two or more 5G routers at the same time; 6. It's normal situation if the wireless transmission speed is a bit slow, the number of real-time scanning frames is slightly lower and the laser line flickers.
FCC Warning	This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
